Handling ListView Selection Changes

Why Did It Work Earlier?

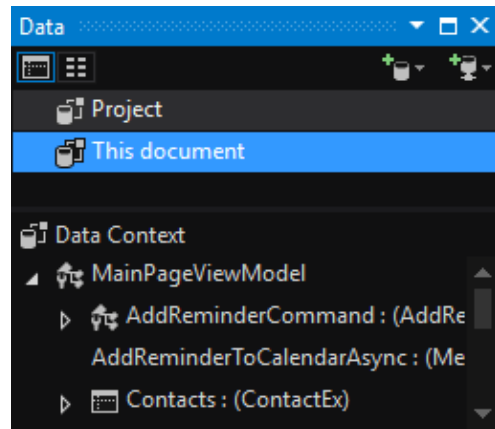

```
<Page.DataContext>  
    <local:MainPageData />  
</Page.DataContext>
```

```
<ListView ...  
    ItemsSource="{Binding Namedays}" />
```

Summary

Databinding separates logic from UI

One- or two way connections

UI – to – UI binding

Needs INotifyPropertyChanged to work

Use ObservableCollection for non-static lists
